Hand-drawn schematic diagram of a vacuum tube radio receiver. The circuit includes a 6.3V power supply, a 500 pF capacitor, a 385V transformer, a 80 vacuum tube, and a 250 ohm resistor. The schematic shows various components like capacitors (0.1 μF, 0.01 μF), resistors (100, 130, 220, 250, 75), and a 1A current source.
